How I Check a Landing Page

Sandro Marmelo — E-commerce & Digital Operations Specialist

I don't guess. I audit, test and fix.

---

1. **Content & translation**
   Review copy against the source text — tone, terminology and claims consistent in both languages.

2. **Metadata**
   Set menu title, URL alias, title tag, meta description and keywords in the CMS.

3. **Links & UTMs**
   Test every internal and external link; add UTM parameters for campaign attribution.

4. **Tracking**
   Verify GTM container and GA4 events fire correctly on page load and on key interactions.

5. **Desktop & mobile**
   Check layout, images and CTAs on both breakpoints before publishing.

6. **Functionality**
   Test forms, buttons and redirects end to end, from the customer's side.

7. **Live check after publishing**
   Re-verify the page live — not just in staging or preview.

8. **Issue log**
   Log every issue found with an owner and a status, until it's resolved.
